Scroll Bar appearing/reappearing on Ciphers Page

The issue I'm having with my code is on the Caesar Ciphers page of our website. All of the navbar links and the encode button have animations to them, and when on the Ciphers component page there is an issue. When you scroll over each animated link, the scroll bar appears, then disappears when you stop hovering over the item.

- Open website
- Navigate to Ciphers page
- Scroll over any link in nav bar
- Scroll over the "Encode" button
